I'm extremely concerned about the inadequacy of the majority of the options in the EPA proposal for the cleanup of the superfund site in the Willamette River

The goal of the cleanup must be to end the Fish Consumption Advisory, for all individuals, including breast feeding women, related to pollutants found in the Portland Harbor. The EPA must provide a date by which the advisory will be lifted. Firm deadline date(s) must be established and adhered to.

The EPA's plan removes far too little contaminated sediment from the river. I support the recommendation that at least 1000 acres of polluted sediment be removed.

The EPA's plan prescribes far too much "Monitored Natural Recovery" which in essence leaves polluted material in the river, and monitors it over time.

This approach is a non-solution.

Those companies and individuals who have liability for the PCBs, PAH, DDT and other toxic and persistent pollutants in the river sediments, must meet their community obligation to do the right thing and conduct a comprehensive and timely cleanup. Do not allow the polluters a free pass. They MUST be held accountable, and pay for the environmental impacts they have wrought upon our magnificent River.

This is my River. I'm incensed that the EPA is considering anything less than a complete and thorough remediation of this environmental disaster.

Do what is required to return the Willamette River to its pre-industrial pristine condition.

Respectfully,
